

Neurable and Westbridge Capital

About Time Someone Built Intelligence into Brain Health

52% of Workers Experience Burnout	\$190B Annual Economic Impact	28% Show High Emotional Exhaustion	BCI Market Growing 15% CAGR
Workplace burnout costs the U.S. economy \$190 billion annually through health-related expenses, absenteeism, reduced productivity, and occupational injuries.	Over half of survey respondents report experiencing burnout, with rates increasing post-pandemic from 43% to 52%, creating a massive market opportunity for cognitive health solutions.	28% of workers score high in emotional exhaustion, with multivariable analysis showing this is the only burnout dimension significantly associated with productivity loss.	The brain-computer interface market is projected to reach \$8.73 billion by 2033, growing at 15.13% CAGR, with non-invasive solutions dominating 76.5% of the market.
Neurable's MW75 Neuro headphones represent the first consumer-grade brain-computer interface that seamlessly integrates EEG monitoring with premium audio, enabling real-time focus tracking and personalized brain break recommendations to combat the epidemic of workplace burnout.

Traditional Wellness & Productivity Tools

Offer generic productivity tips and break schedules that don't account for individual brain activity patterns

Require manual input and self-reporting for focus tracking, leading to inconsistent and subjective data collection

Rely on external behavioral metrics like heart rate, sleep patterns, and step counts that provide indirect indicators of cognitive state

Neurable's Direct Brain Monitoring

Delivers personalized brain break recommendations based on individual neural activity patterns and optimal cognitive performance windows

Uses proprietary AI to automatically detect focus patterns and cognitive load without any manual input required

Captures real-time EEG brain signals through soft fabric neural sensors, providing direct measurement of cognitive states and focus levels

Some Key Observations about Market Structure

1. The brain-computer interface market is experiencing explosive growth, projected to reach \$8.73 billion by 2033 with 15.13% CAGR, driven by advances in AI and non-invasive technologies
2. North America dominates with 48% market share, led by companies like Neurable, Neuralink, and Synchron, supported by substantial R&D investments and clinical trials
3. Non-invasive BCI solutions represent 76.5% of the market, with consumer headsets enabling everyday usage scenarios like productivity tracking and neurofeedback
4. Healthcare applications currently hold 45-57% market share, but entertainment, gaming, and workplace productivity segments are showing the highest growth rates
5. The shift from medical-only to consumer applications is creating new market categories, with focus tracking and cognitive enhancement emerging as key use cases

Competitive Landscape - Brain-Computer Interface Market

Vertical	Legacy/Build Your Own	Modern Embedded
EEG Monitoring	Clinical-grade caps, gel electrodes, lab-only	Neurable MW75, Emotiv EPOC+, everyday wearables
Focus Tracking	Manual logging, time-tracking apps, self-reporting	Real-time brain signal analysis, AI-powered insights
Productivity Tools	Generic break reminders, Pomodoro timers	Personalized brain break recommendations
Audio + Health	Separate headphones and fitness trackers	Integrated audio-neurotechnology devices
Burnout Prevention	Post-symptom wellness programs, HR interventions	Proactive cognitive health monitoring
